

Ashok Suryakant More

Boston, MA, 02120 | Open to relocation | (617) 412-5427 | ashoksmore11@gmail.com | linkedin.com/in/ashok-more

Full-stack Software Engineer with 5+ years building and scaling production applications using **Python, React, Java, and AWS**. Experienced in **FinTech** and **data-intensive** systems, with a proven track record of owning product outcomes from 0 to 1. Strongly focused on integrating **ML/AI workflows** into production, establishing rigorous AI code review loops, and collaborating across teams to deliver high-quality solutions.

TECHNICAL SKILLS

- **Programming Languages:** Python (OOP, design patterns, async/await, multi-threading), Java, JavaScript, C++, SQL.
- **Frameworks:** Django, FastAPI, React, Spring Boot, SQLAlchemy, Hibernate, Pytest, JUnit, Jest, Material-UI.
- **AI & LLM Ecosystem:** Large Language Models (Groq, Ollama), Prompt Engineering, Deterministic AI Patterns, AI Code Review, RAG.
- **Cloud & Databases:** AWS (EC2, Lambda, SNS, DynamoDB, CloudWatch), Azure, MySQL, PostgreSQL, MongoDB, Redis.
- **Messaging & APIs:** Apache Kafka (Streams, Connect), AWS SQS, WebSockets, Event-Driven Systems, REST, SOAP.
- **Observability & Analytics:** Sumo Logic, AWS CloudWatch.
- **DevOps & CI/CD:** Kubernetes (EKS, AKS), Docker, Terraform, AWS CodePipeline, Maven, Git, GitHub, TFS.
- **Agile & Leadership:** Scrum, Sprint Planning, Jira, Code Reviews, Team Mentoring.

WORK EXPERIENCE

Software Engineer (Python + Full-Stack) | Medsix, Boston, MA (MedTech)

03/2024 - Present

- Architected **full-stack** clinical analytics platform using **Python FastAPI backend, React (TypeScript) frontend**, consuming **Apache Kafka** streams; reduced end-to-end latency by 35% through **backend optimization** and **component-level state management**.
- Designed and implemented **Python FastAPI backend services** exposing **15+ RESTful endpoints** with **async** handlers for high-throughput analytics processing; **optimized PostgreSQL database queries** reducing data retrieval time by 20%.
- Optimized scalable **React** and **TypeScript** frontend with **Material-UI** library, establishing architectural patterns for **reusable components**.
- Implemented comprehensive testing strategy using **Pytest (backend)** and **Jest/React Testing Library (frontend)**, achieving 95% code coverage: established testing standards adopted across teams.
- Led **peer review** and **code quality processes**, establishing strict guidelines for evaluating, optimizing, and securely **integrating AI-generated code** and **logic** into the core enterprise backend.

Software Engineering API Intern (Python + Java) | DriveWealth, Jersey City, NJ (FinTech)

06/2022 - 12/2022

- Engineered **Python Django analytics** backend aggregating 500GB+ monthly API logs with optimized query performance; designed **React dashboard** with **Material-UI** for operational analytics and monitoring.
- Engineered **distributed, high-availability Brokerage APIs via Java Spring Boot microservices on AWS**, facilitating secure, enterprise-grade transaction processing for **100+ global financial partners** and **millions** of retail investors.
- Implemented **Redis-based session management** for **high-frequency trading APIs**, storing user sessions with automatic expiration and achieving 99.99% session availability for global brokerage partner integrations.
- Implemented **FINRA-compliant API security protocols** using **Okta and JWT**, ensuring robust security for financial transactions.

Software Engineer | Ingram Micro (Python + Full-Stack) (eCommerce, Logistics and Cloud Solutions)

07/2017 - 08/2021

- Architected **Python Django microservices backend** for complex **marketplace** operations including **user management, inventory, order processing, and payment settlement**.
- Optimized **SQL schemas** with partitioning, and stored procedures for complex transactional workloads supporting marketplace interactions.
- Built **Java Spring Boot microservices on AWS EKS** to power the e-commerce portal, **handling order workflows, catalog searches, and user authentication**, achieving 99.9% uptime and scaling 1k+ daily transactions.
- Spearheaded the transition to **Infrastructure-as-Code (IaC)** by provisioning **AWS** environments with **Terraform** and **migrated legacy deployments** to containerized **Kubernetes (EKS)** clusters, standardizing release workflows and eliminating environment drift.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (In Progress).

PROJECTS

AI-Assisted Expense Tracker (Full-Stack + GenAI) | github.com/ashoksmore/expense-tracker-api | [Live Demo](#)

02/2026 - 04/2026

- Engineered a full-stack expense tracker application utilizing **Python FastAPI, SQLAlchemy, and SQLite**, delivering **RESTful CRUD APIs** with **Pydantic request/response validation** and a **React (Vite) frontend** hosted on **Render**.
- Built configurable **LLM integrations** behind FastAPI routes, supporting **Groq (cloud)** and **Ollama (local)** inference to power **natural-language expense parsing, dynamic categorization, and spending insights**.
- Implemented a **deterministic-first AI design pattern** by computing spend aggregations in pure Python and grounding LLM prompts with pre-computed JSON, ensuring accurate dashboard analytics and graceful system degradation during LLM provider outages.

EDUCATION

Northeastern University, Boston, MA

09/2021 - 12/2023

Master of Science in Computer Science

Relevant courses: Database Management System, Programming Design Paradigm, Algorithms, Data Mining, Machine Learning, NLP.

LEADERSHIP AND RECOGNITION

- **Led a team** of Junior developers at Ingram Micro in development of **Python** and **Django**-based application for resume classification by utilizing **NLP** techniques, achieving a 90.25% accuracy rate and enhancing HR operational efficiency.
- **Awarded Best Performer** of the Year 2019 award at Ingram Micro for outstanding project delivery and 100% customer satisfaction.
